

# Contents

## Preface

## Part one: Summaries

### 1 Introduction

### 2 Global changes and environmental problems

#### 2.1 Global change study

#### 2.2 Significant global environment problems threatening human being

#### 2.3 Sensitive zones in China to global changes

### 3 Status of groundwater environment in northern China

#### 3.1 Status of groundwater environment in northern China

##### 3.1.1 Agricultural activities

##### 3.1.2 Construction of large hydraulic engineering

##### 3.1.3 Effect of wastewater and solid waste of industrial and mining enterprise and domestic garbage

##### 3.1.4 Heavy exploitation of groundwater and forming of regional pumping cones in cities

#### 3.2 Status of karst water environment in northern China

##### 3.2.1 Continuous falling of karst water level and prevalent decrease of spring discharge

##### 3.2.2 Continuous deterioration of karst water quality

## **4 Groundwater and global changes**

### **4.1 Karsification and global changes**

### **4.2 Indication of groundwater to global change**

#### **4.2.1 Physical indicator**

#### **4.2.2 Chemical indicator**

### **4.3 Effect of global change on groundwater**

#### **4.3.1 Effect of climate change on groundwater**

#### **4.3.2 Effect of the sun and the moon on groundwater**

### **4.4 Feedback effect of groundwater change on environment**

## **Part two: Evolution of karst water systems in Shanxi Province**

## **5 Evolution of karst water systems on geological timescale**

### **5.1 Karst development history in northern China**

### **5.2 Evolution of geological-ecological environment in China from Late Tertiary**

#### **5.2.1 Evolution from Late Tertiary to Middle Pleistocene**

#### **5.2.2 Evolution since Middle Pleistocene**

#### **5.2.3 Evolution since Holocene**

### **5.3 Evolution of karst water systems on geological timescale: a case study of the Niangziguan springs**

#### **5.3.1 Status of Niangziguan karst water system**

#### **5.3.2 Distribution and composition characteristic of travertine**

### 5.3.3 Evolution process of the Niangziguan springs

## **6 Evolution of karst water systems on historical timescale**

### **6.1 Climate changes in historical periods**

#### 6.1.1 Early and middle period of Holocene

#### 6.1.2 The period prior to Qin Dynasty, the western Zhou Dynasty, the Spring and Autumn period, and the Warring States Period

#### 6.1.3 The Qin and Han Dynasty

#### 6.1.4 The Wei Dynasty, the western Jin Dynasty, the sixteen states period, and the Northern Dynasty

#### 6.1.5 The Shui Dynasty, the Tang Dynasty, and the five Dynasties

#### 6.1.6 The Northern Song Dynasty, the Jin Dynasty, and the Yuan Dynasty

#### 6.1.7 The Ming and Qing Dynasty

### **6.2 History of human being activities**

### **6.3 Evolution of karst water systems on historical timescale**

#### 6.3.1 Fossil lake record in Shanxi Province

#### 6.3.2 Quiescent spring record in Shanxi Province

#### 6.3.3 Potential methods of research on evolution of karst water systems on historical timescale

## **7 Evolution of karst water systems on instrumental record timescale**

### **7.1 Climate change in on instrumental record timescale**

### **7.2 Effect of human being activities on environment**

## **7.3 Karst water system evolution on instrumental record timescale: a case study of the Shentou springs**

**7.2.1 Status of the study area**

**7.2.2 Hydrogeological conditions in the study area**

**7.2.3 Analysis of causes of the discharge attenuation of the Shentou springs**

## **8 Conclusions and expectations**

## **References**
